

# SURVIVING THE ZOMBIE APOCALYPSE

Volume 1 / Issue 1

## RECENT NEWS

What's going on in recent news in relation to zombies?

Apparently there's a drug making its way around the US right now that is literally rotting people from the inside out.

Check out the link below to find what it is.

## TAKE ACTION

Let's face it, zombies have taken over and society has collapsed. No more electricity, running water, stores, government, etc. How will you survive?

*"When there's no more room in hell, the dead will walk the earth." – George Romero*

---

## FAST OR SLOW?

What will zombies looklike when they finally take over? Will they be fast like in the realmke of *Dawn of the Dead* or *28 Days Later*? Or will they be slow, like the classic George Romero zombie?

I guess it depends on how people are turned in to zombies. If they are dead that have risen, chances are they will be slow. They will be suffering the effects of rigor and rot.

However, if it is some sort of biological agent that turns living people into unstoppable forces, there's a very good chance we could be facing quick moving hordes of zombies.

## BUG OUT BAG GUN

A neat little handgun to have in the event of a zombie apocalypse is a Kel-Tec PMR-30. It is a .22 Mag semi-auto pistol that is easy to use and light weight. The bullets are also small and light weight, so carrying around a bunch when you are on foot shouldn't be a problem.

It is a .22 Mag so it should have enough stopping power for putting down a zombie with a head shot.

And this little handgun also boasts a 30 round magazine and fiber optic sights.

## DUCT TAPE!

Sure duct tape can be used to patch just about anything (including people), but did you know it can be used as impromptu zombie armor?

Just wrap your clothing in duct tape to create a bite proof barrier!

See a suggestion here:
